Summary

Python Backend Developer and 2025 Computer Science graduate with hands-on experience developing web applications and RESTful APIs using Python, Django, and Django REST Framework. Experienced in building CRUD-based applications, implementing Django ORM models, server-side validation, role-based access control, and integrating MySQL and MongoDB databases. Developed projects including a Blood Bank Management System, Django REST API application, and Stock Management System. Strong foundation in OOP, SQL, debugging, Git, API testing, and backend development, with a focus on writing clean, maintainable, and reliable code.

Education

Bachelor of Technology (B.Tech) in Computer Science & Engineering 2025
Srinix College Of Engineering, Balasore, Odisha

Technical Skills

Programming Languages: Python, JavaScript, SQL
Frameworks & Libraries: Django, Django REST Framework (DRF), React, NumPy, Pandas
Frontend Development: HTML5, CSS3, Bootstrap, JavaScript, React, Responsive Web Design
Backend Development: Python, Django, RESTful API Development, ORM, CRUD Operations, MVT Architecture
Databases: MySQL, MongoDB, SQL, Database Design, Query Optimization
Developer Tools & Platforms: Git, GitHub, VS Code, Postman (API Testing), AWS (Cloud Computing)
Core Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP), Exception Handling, Debugging, Version Control, Agile/Scrum, SDLC, Cross-Functional Collaboration, Problem Solving

Experience

ATM Simulation Remote
Python Full Stack Development Internship

- Engineered a console-based ATM simulation in **Python** using object-oriented design (OOP) to model core banking operations, including deposits, withdrawals, and balance inquiries.
- Strengthened application reliability by implementing structured exception handling and input validation, reducing unhandled runtime errors by an estimated 30%.
- Integrated a **MySQL** database with the Python backend to persist transaction records, enabling reliable CRUD operations and consistent data across user sessions.

Projects

Blood Bank Management System | *Python, Django, MySQL, HTML, CSS, Bootstrap*

- Designed and built a full stack web application to manage blood donor records, inventory, and hospital requests, streamlining coordination between donors and recipients.
- Developed RESTful CRUD functionality with **Django** and **MySQL** to handle donor registration, blood stock tracking, and request processing with server-side data validation.
- Architected a normalized relational database schema using **Django ORM** and implemented role-based access control to secure sensitive donor and hospital data.

Django CRUD Application | *Python, Django, Django REST Framework, MySQL*

- Built a full-featured CRUD application with **Django** and **Django REST Framework**, exposing RESTful API endpoints for Create, Read, Update, and Delete operations.
- Designed database models using **Django ORM** and implemented JSON-based API responses with validation, following Django's MVT architecture.
- Tested API endpoints with **Postman** to verify response accuracy and catch edge cases pre-integration.

Stock Management System | *Python, Django, MySQL, REST APIs*

- Engineered a stock/inventory system with backend REST APIs in **Django**, enabling real-time tracking of stock levels, purchases, and sales.
- Optimized **MySQL** queries to speed up data retrieval, reducing average lookup time for inventory searches.
- Added input validation to maintain data accuracy across concurrent stock updates.

Certifications

- Full Stack Python Development — **Naresh IT (Naresh I Technologies)**
- Python Programming Masterclass — **Udemy**
- Python Fundamentals for Beginners — **Great Learning**
